

ABSTRACT

An apparatus for emptying containers of fruit and vegetable produce, wherein a tipping device receives a container, tips the container, and unloads the container
5 onto a conveying device for feeding the container in a given traveling direction and
along a path extending between an input station connecting with the tipping device,
and an emptying station for emptying the container; the path being of a length,
measured parallel to the traveling direction, at least equal to the length of the
container, also measured parallel to the traveling direction.
